Mother Zion in Deutero-Isaiah: A Metaphor for Zion
Theology offers the unique perspective that personified mother Zion in Deutero-Isaiah is not just a metaphor used for a rhetorical purpose but a cognitive metaphor representing Zion theology, a central theme in the Book of Isaiah. The author deftly combines the methods of metaphor theory and intertextuality to explain the vital but often overlooked conundrum that Zion in Deutero-Isaiah is an innocent mother, unlike the adulterous wife in other prophetic books. This interpretation offers a vital corrective to the view of women in the biblical context. As a result of this usage, Deutero-Isaiah paradoxically presents Yahweh the Creator as the one who gives birth to the people, not mother Zion. This understanding explains the concentration of gynomorphic imagery used for God in this prophetic book, providing a counterbalance to patriarchal perspectives of God. Finally, a fresh insight is offered into the ongoing debate between universalism and nationalism in Deutero-Isaiah, based on the premise that as a symbol of Zion theology, mother Zion represents Yahweh's universal sovereignty rather than a nationalistic ethnicity.

Who are we? Who do we want to become? How do we imagine our futures? Located at the intersection of theory and practice, this anthology brings together the voices of scholars, graduate students, and educational practitioners as they explore foundational concepts that inform questions of identity and citizenship and shape the way we think about the future. Concepts - such as narrative, dreams, imagination, and hope - are explored from both a philosophical perspective and from the perspective of young people from Israel and Germany who reflect on their own experiences. Increasing nonresponse rates in surveys are a matter of concern internationally, as low response rates put the quality of survey data into question. The risk of biased data is high if nonrespondents differ significantly from respondents. In arguing that sample persons' personality traits are decisive in survey participation decisions, Denise Saßenroth investigates the mechanisms causing increasing nonresponse rates. Based on a modification of the Social Isolation Hypothesis, she analyses the impact of sample persons' personality on participation decisions with data from the German General Social Survey and the LISS Panel from the Netherlands. Recent years have seen considerable progress in automotive safety and autonomous navigation applications, fueled by the remarkable advance of individual Computer Vision components, such as object detection, tracking, stereo and visual odometry. The goal in such applications is to automatically infer semantic understanding from the environment, observed from a moving vehicle equipped with a camera system. The pedestrian detection and tracking components constitute an actively researched part in scene understanding, important for safe navigation, path planning, and collision avoidance. Classical tracking-by-detection approaches require a robust object detector that needs to be executed in every frame. However, the detector is typically the most computationally expensive component, especially if more than one object class needs to be detected. A first goal of this thesis was to develop a vision system based on stereo camera input that is able to detect and track multiple pedestrians in real-time. To this end, we propose a hybrid tracking system that combines a computationally cheap low-level tracker with a more complex high-level tracker. The low-level trackers are either based on level-set segmentation or stereo range data together with a point registration algorithm and are employed in order to follow individual pedestrians over time, starting from an initial object detection. In order to cope with drift and to bridge occlusions that cannot be resolved by low-level trackers, the resulting tracklet outputs are fed to a high-level multihypothesis tracker, which performs longer-term data association. With this integration we obtain a real-time tracking framework by reducing object detector applications to fewer frames or even to few small image regions when stereo data is available. Reduction of expensive detector evaluations is especially relevant for the deployment on mobile platforms, where real-time performance is crucial and computational resources are notoriouslyGet caught up in this gripping classic romantic suspense by New York Times bestselling author Carla Neggers. Rebecca Blackburn caught a glimpse of the famed Jupiter Stones as a small child. Unaware of their significance, she forgot about them—until she discovered the priceless, long-missing gems were the key to a deadly chain of events spanning thirty years and three continents...sparing no one. When a seemingly innocent photograph reignites one man's simmering desire for vengeance, Rebecca turns to Jared Sloan, the love she lost to tragedy and scandal. His own life has changed forever because of the secrets buried deep by their two families. Their relentless quest for the truth will dredge up bitter memories and shocking revelations of misplaced loyalty, dangerous pride and naked ambition...and they will stop at nothing to expose a cold-blooded killer. Originally published in 2009This festschrift is situated within the contexts of the 'Writing Culture' debate, the 'Rhetoric Culture' project, and the legacy of anthropologist Stephen Tyler's work on language and representation. While Writing Culture (1986) alerted readers to the power of ethnographers over their field, Writing in the Field alerts readers to the power of the field over its ethnographers. Rather than reprise familiar debates about writing and representation, the book's individual chapters elucidate how anthropological fieldwork is a highly fraught, provisional, and incomplete practice enmeshed in the gaps between self and the other. The book's emphasis on the concepts of pathos, epiphany, and dissociation is developed through essays that are personal, yet not merely subjective, for they draw on and contribute to deep traditions of thinking about culture and rhetoric. The author here clarifies and defends Aristotle’s Three Laws of Thought, called the Laws of Identity, Non-contradiction and Exclusion of the Middle – and introduces two more, which are implicit in and crucial to them: the Fourth Law of Thought, called the Principle of Induction, and the Fifth Law of Thought, called the Principle of Deduction. This book is a thematic compilation drawn from past works by the author over a period of twenty-three years. Meiosis is one of the most critical processes in eukaryotes, required for continuation of species
and generation of new variation. In plants, meiotic recombination is by far the most important source of genetic variation. In Plant Meiosis: Methods and Protocols, expert researchers in the field detail methods for molecular cytogenetics and chromosome analysis in plants. These state-of-the-art protocols allow studying the organization and behavior of the genetic material in a wide range of both model and crop species. Written in the highly successful Methods in Molecular Biology™ series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step and readily reproducible laboratory protocols, and key tips on troubleshooting and avoiding known pitfalls. Authoritative and practical, Plant Meiosis: Methods and Protocols provides and extensive list of protocols developed and used in a number of laboratories at the cutting edge of meiosis and chromosome research.

This book speaks about a world of mute objects ranging from plant bulbs, divining rods, and archeological findings to drawn, painted, or printed images. It describes the functions of these objects as ambiguous and polyvalent carriers of knowledge, and it analyzes the ways in which networks of scholars, craftsmen, mathematicians, anatomy professors, or merchants active in the Low Countries attributed new meanings to them. The book examines a period in which cities like Antwerp and Amsterdam were nodal points in the international exchange of goods, news, and skills. In recent years, the problem of translation has received renewed attention, but it has been mostly approached from a linguistics or ontological perspective. This book focuses on another aspect, i.e. the political and ethical implications of translation. Engaged in a debate, which encompasses various philosophers - such as Schleiermacher, Benjamin, Ortega y Gasset, Quine, Gadamer, Derrida, and Ricur - the book's contributions show that translation can be considered in an ambivalent way (which has a great ethical and political significance) as an attempt to bring the other back to one's own world or, vice versa, as an attempt to open up one's own world and to experience different cultures. Translation is in fact, inevitably, an experience of alterity. (Series: Philosophy - Language - Literature / Philosophie - Sprache - Literatur - Vol. 4)

Readers gain a clear understanding of engineering design as ENGINEERING DESIGN PROCESS, 3E outlines the process into five basic stages -- requirements, product concept, solution concept, embodiment design and detailed design. Designers discover how these five stages can be seamlessly integrated. The book illustrates how the design methods can work together coherently, while the book’s supporting exercises and labs help learners navigate the design process. The text leads the beginner designer from the basics of design with very simple tasks -- the first lab involves designing a sandwich -- all the way through more complex design needs. This effective approach to the design model equips learners with the skills to apply engineering design concepts both to conventional engineering problems as well as other design problems. In Scholars in Action, an international group of 40 authors open up new perspectives on the eighteenth-century culture of knowledge, with a particular focus on scholars and their various practices. The very essence of the existential relationship between the human and the divine is communicated by the English word, 'worship'. Although the word appears to carry a univocal meaning in English, no such word per se exists in the Greek New Testament. The English word at best explains but does not adequately and completely define the dynamics involved in the relationship between humanity and God. &ltI&gtWorship and the Risen Jesus in the Pauline Letters approaches the subject of Christian worship in respect to its origins from the perspective of the earliest New Testament writer: Paul. This book seeks to address the relative absence in scholarship of a full treatment of worship in the Pauline
Letters. Closely related to the theme of Christian worship in the Pauline Letters is the person of the risen Jesus and the place he occupies in the faith community. This work proposes a proper working definition of, including criteria for, 'worship'. Paul employed an array of Greek words as descriptors to communicate the various nuances and dimensions related to one's relationship with God. 'Worship' also functioned for Paul as a boundary marker between believers and unbelievers vis-à-vis baptism and the Eucharist. The eschatological and teleological aspects of worship are also examined through a study of the &lt;I&gt;Carmen Christi (Phil 2: 6-11). This study maintains that worship in Paul is not defined by any one word but is rather a composite and comprehensive personal religious relationship between the worshipper and God."Theology is about God and Creation, or more precisely perhaps about our ideas of them, how they are formed and somewhat justified, although it is stressed that they can be neither proved nor disproved. Known for his theories of personality and political insight, Fromm dissected the sadomasochistic appeal of brutal dictators while also eloquently championing love which, he insisted, was nothing if it did not involve joyful contact with others and humanity at large. Admired all over the world, Fromm continues to inspire with his message of universal brotherhood and quest for lasting peace. The first systematic study of Fromm's influences and achievements, this biography revisits the thinker's most important works, especially Escape from Freedom and The Art of Loving, which conveyed important and complex ideas to millions of readers. The volume recounts Fromm's political activism as a founder and major funder of Amnesty International, the National Committee for a Sane Nuclear Policy, and other peace groups. Consulting rare archival materials across the globe, Lawrence J. Friedman reveals Fromm's support for anti-Stalinist democratic movements in Central and Eastern Europe and his efforts to revitalize American democracy. For the first time, readers learn about Fromm's direct contact with high officials in the American government on matters of war and peace while accessing a deeper understanding of his conceptual differences with Freud, his rapport with Neo-Freudians like Karen Horney and Harry Stack Sullivan, and his association with innovative artists, public intellectuals, and world leaders. Friedman elucidates Fromm's key intellectual contributions, especially his innovative concept of "social character," in which social institutions and practices shape the inner psyche, and he clarifies Fromm's conception of love as an acquired skill. Taking full stock of the thinker's historical and global accomplishments, Friedman portrays a man of immense authenticity and spirituality who made life in the twentieth century more humane than it might have been.In &lt;I&gt;The Causal Exclusion Problem, the popular strategy of abandoning any one of the principles constituting the causal exclusion problem is considered, but ultimately rejected. The metaphysical foundations undergirding the causal exclusion problem are then explored, revealing that the causal exclusion problem cannot be dislodged by undermining its metaphysical foundations - as some are in the habit of doing. Finally, the significant difficulties associated with the bevy of contemporary nonreductive solutions, from supervenience to emergentism, are expanded upon. While conducting this survey of contemporary options, however, two novel approaches are introduced, both of which may resolve the
causal exclusion problem from within a nonreductive physicalist paradigm. The Causal Exclusion Problem, which relentlessly motivates the vexing causal exclusion problem and exhaustively surveys its metaphysical assumptions and contemporary responses, is ideal for an advanced undergraduate or graduate course in the philosophy of mind. How deep is the impact of the 2008 global crisis on Ecuador, Brazil and Mexico? Although having similar experience with the policies of the Washington Consensus, Ecuador, Brazil and Mexico have established different concepts of social and economic development during the last decade. These differences could also be observed during and after the global crisis in 2008. In contrast to the social anti-neoliberal policy implemented in Ecuador and the progressive social and economic policy in Brazil, Mexico has been carrying out the policy of continued neoliberalism. One of the conclusions drawn is that Mexico faces abysmal inequalities and persistence of poverty, which are not only explicated by historical roots, but also by strong applications of neoliberal policies. Ritual was a cradle of archaic philosophy in India. Mythological concepts were synthesized in the ritual context, and its results gave a new interpretation to the rituals themselves and to the life of man. The Agnihotra ritual is experienced differently by those who know what it is, and life is experienced differently by those who carry out the Agnihotra. A ritual presents us with a riddle which actually has no answer. What matters is not the intrinsic meaning, but the process in which the meaning is generated. It is true that ritual is pure activity without meaning or goal, but it is not meaningless in the sense that it generates riddles, and eventually meanings. This study is a philological study of the Vedic mythology, while also being a contribution to ritual studies. What's in a name? Plenty, according to Christopher. He is tired of his ordinary name - millions of people are called Christopher, including three in his class alone! Christopher wants to be special, so he decides to change his name. Inventing names for himself that are inspired by various heroes and celebrities, Christopher manages to convince everyone to call him by a different name. Of course the plan backfires when grandma sends a cheque and only his real name will do! The lovable hero of Please Clean Up Your Room! returns in this lighthearted story with a simple message about being special. Wounds of History takes a new view in psychoanalysis using a trans-generational and social/political/cultural model looking at trauma and its transmission. The view is radical in looking beyond maternal dyads and Oedipal triangles and in its portrayal of a multi-generational world that is no longer hierarchical. This look allows for greater clinical creativity for conceptualizing and treating human suffering, situating healing in expanding circles of witnessing. The contributors to this volume look at inherited personal trauma involving legacies of war, genocide, slavery, political persecution, forced migration/unwelcomed immigration and the way attachment and connection is disrupted, traumatized and ultimately longing for repair and reconnection. The book addresses several themes such as the ethical/social turn in psychoanalysis; the repetition of resilience and wounds and the repair of these wounds; the complexity of attachment in the aftermath of trauma, and the move towards social justice. In their contributions, the authors remain close to the human stories. Wounds of History will be of interest to psychoanalysts, psychologists and other mental health professionals, as well as students or teachers of trauma studies, Jewish and gender studies and studies of genocide. The three-dimensional camouflage of the famed ghillie suit is unparalleled in its ability to conceal the outdoorsman. But preassembled suits are expensive, and kits can be both costly and time-consuming. Tom Forbes, author of the best-selling PVC Projects for the Outdoorsman book and The Invisible Advantage video, has come up with an alternative. Using simple procedures and economical, easily found materials, Forbes guides readers through the manufacture of several different kinds of ghillie suit, including the garment used by the British military during World War II. This handy workbook contains tips on materials and techniques used in ghillie suit construction, as well as valuable information on stalking methods. Studies in Ecumenics - Vol. 2) In the past few decades, scientists of human nature—including experimental and cognitive psychologists, neuroscientists, evolutionary theorists, and behavioral economists—have explored the way we arrive at moral judgments. They have called into question commonsense about character and offered troubling explanations for various moral intuitions. Research like this may help explain what, in fact, we do and feel. But can it tell us what we ought to do or feel? In Experiments in Ethics, the philosopher Kwame Anthony Appiah explores how the new empirical moral psychology relates to the age-old project of philosophical ethics. Some moral theorists hold that the realm of morality must be autonomous of the sciences; others maintain that science undermines the authority of moral reasons. Appiah elaborates a vision of naturalism that resists both temptations. He traces an intellectual genealogy of the burgeoning discipline of “experimental philosophy,” provides a balanced, lucid account of the work being done in this controversial and increasingly influential field, and offers a fresh way of thinking about ethics in the classical tradition. Appiah urges that the relation between empirical research and morality, now so often antagonistic, should be seen in terms of dialogue, not contest. And he shows how experimental philosophy, far from being something new, is actually as old as philosophy itself. Beyond illuminating debates about the connection between psychology and ethics, intuition and theory, his book helps us to rethink the very nature of the philosophical enterprise. The omnipresence and popularity of American consumer products in Japan have triggered an avalanche of writing shedding light on different aspects of this cross-cultural relationship. Cultural interactions are often accompanied by the term cultural imperialism, a concept that on close scrutiny turns out to be a hasty oversimplification given the contemporary cultural interaction between the U.S. and Japan. »Embracing Differences« shows that this assumption of a one-sided transfer is no longer valid. Closely investigating Disney theme parks, sushi, as well as movies, Iris-Aya Laemmerhirt reveals a dialogical exchange between these two nations that has changed the image of Japan in the United States. Animal minds and animal ethics - different origins, connecting similarities. Philosophers working on questions of animal ethics usually draw on research into animal cognition and subscribe to strong positions regarding animal minds. Whereas philosophers interested in the question of animal minds sometimes draw ethical conclusions from the positions they argue for. In spite of such overlaps, these two areas of research have grown up separately. One reason for this separation stems from the institutional distinction between theoretical and practical philosophy. The principal aim of this anthology is to build bridges between the fields and different philosophical approaches of animal ethics and of animal minds and cognition. Diese Arbeit analysiert das rechtliche Schicksal einer Schieds- oder Gerichtsstandsvereinbarung bei Abtretung der dieser Vereinbarung zugrundeliegenden Forderung. Die Arbeit zeigt auf, dass die diesbezüglich vorherrschende Ansicht, die prozessuale Vereinbarung ginge als Eigenschaft der materiellen Forderung automatisch mit dieser auf den Zessionar über, dogmatisch nicht haltbar ist, da die Wirksamkeit der prozessualen Vereinbarung nicht vom Bestehen der Forderung abhängt. Der Zessionar kann jedoch gleichwohl - unabhängig vom Bestehen der Forderung - über eine Gesamtanalogie nach 398 ff. BGB an eine prozessuale Vereinbarung der bisherigen Parteien gebunden werden, da er in deren
Rechtsverhältnis (einschließlich der hieran geknüpften prozessualen Vereinbarung) eintritt.
