You like social outings and spending time with your friends. So is this because you are genetically disposed to do so, or is it because of the environment you grew up in? And what is the reason for your fear of dogs? These are some of the things that form a part of the age-old nature vs. nurture debate, and we try to understand which of two factors affects our behavior more.

infectious diseases. Recent decades have brought major advances in understanding the complex interactions between the microbes that cause disease

Genetic engineering, also called genetic modification or genetic manipulation, is the direct manipulation of an organism's genes using biotechnology. It is a set of technologies used to change the genetic makeup of cells, including the transfer of genes within and across species boundaries to produce improved or novel organisms. New DNA is obtained by either isolating and copying the genetic

GeneMANIA: GeneMANIA lets you visualize your gene lists and finds other related genes by using a very large set of functional association data. g:Profiler: Ontologies, pathways, and more from your gene list. Currently available for 200+ species. ToppGene: A suite of ...

Curly hair is influenced by genes much more than by the environment. While curly hair runs in families—people with curly hair tend to have children with curly hair—its inheritance patterns are often unpredictable. Multiple genes control hair texture, and different variations in these genes are found in different populations.

important medical-related genes. However, hard to map regions in GRCh37 may map well in GRCh38. For these reasons we currently recommend using hg19/GRCh37 and hg38/GRCh38 VCF files if possible for higher sensitivity.

In genes missing a 3' UTR annotation, 500 bp (fly), 800 bp (human and mouse) or 300 bp (worm) downstream of the annotated end of the coding sequence were used as the predicted UTR. For each organism, a catalog with zero flank and with a flank of 3 and 15 ...

Your genome is the entire sequence of your DNA. Your sequence and mine are slightly different. That's why we look different. I've got brown eyes you might have blue, or gray; but it's not just skin-deep. The headlines tell us that genes can give us scary diseases, maybe even shape our personality, or give us mental disorders.

The God gene hypothesis proposes that human spirituality is influenced by heredity and that a specific gene, called vesicular monoamine transporter 2 (VMAT2), predisposes humans towards spiritual or mystic experiences. The idea has been proposed by geneticist Dean Hamer in the 2004 book called *The God Gene: How Faith is Hardwired into our Genes*. The God gene hypothesis is based on a

Genetic engineering is the process of using recombinant DNA (rDNA) technology to alter the genetic makeup of an organism. Traditionally, humans have manipulated genomes indirectly by controlling breeding and selecting offspring with desired traits. Genetic engineering involves the direct manipulation of one or more genes.
