African Political Systems

Revisited Aleksandar Bošković

2022-04-08 Reexamining a classical work of social anthropology, *African Political Systems* (1940), edited by Fortes and Evans-Pritchard, this book looks at the colonial and academic context from which the work arose, as well as its reception and its subject matter, and looks at how the work can help with analysis of current politics in Africa. This book critically reflects upon the history of anthropology. It also contributes to a political

anthropology which is aware of its antecedents, self-reflexive as a discipline, conscious of pitfalls and biases, and able to locate itself in its academic, social and political environment.

The Six Ways of Atheism

Geoffrey Berg 2009 Geoffrey

Berg, a graduate of Cambridge

University, England, believes

the case for atheism has never

been put in as forceful and

logically cogent a way as it

merits, least of all by the great

philosophers. In this book he

sets out to remedy that by

strengthening some traditional

atheistic arguments and by initiating some new logical arguments for atheism. Geoffrey Berg develops six simple completely logical arguments in clear language that practically everybody can understand in a way that has never been done before to prove that belief in God is not merely unsupported by Logic but is actually contrary to Logic. This is a groundbreaking book because it is probably the first attempt by a single author that devotes an entire book to absolutely disproving the existence of God, all the time matching verbal arguments with strictly logical formulations of the argument. It aims to crystallize the case for

atheism in a way that has not been done before. It is likely in retrospect to be seen as a landmark book because some of the novel arguments in this book are likely to be used hereafter by people around the world.

Fault Diagnosis and Fault-
Tolerant Control and Guidance
for Aerospace Vehicles Ali
Zolghadri 2013-10-07 Fault
Diagnosis and Fault-Tolerant
Control and Guidance for

Aerospace demonstrates the attractive potential of recent developments in control for resolving such issues as flight performance, self protection and extended-life structures.

Importantly, the text deals with a number of practically significant considerations: tuning, complexity of design, real-time capability, evaluation of worst-case performance, robustness in harsh environments, and extensibility when development or adaptation is required.

Coverage of such issues helps to draw the advanced concepts arising from academic research back towards the technological concerns of industry. Initial

coverage of basic definitions and ideas and a literature review gives way to a treatment of electrical flight control system failures: oscillatory failure, runaway, and jamming.

Advanced fault detection and diagnosis for linear and linear-parameter-varying systems are described. Lastly recovery strategies appropriate to remaining actuator/sensor/communications resources are developed. The authors exploit experience gained in research collaboration with academic and major industrial partners to validate advanced fault diagnosis and fault-tolerant control techniques with realistic benchmarks or

real-world aeronautical and space systems. Consequently, the results presented in *Fault Diagnosis and Fault-Tolerant Control and Guidance for Aerospace*, will be of interest in both academic and aerospace industrial milieus.
